TECHNICAL EXPERIENCE

Full-Stack Software Engineer - Famo.us   2014
Famo.us Hub, Profile page for Famo.us developers to showcase and manage projects   *Famo.us, Node, PostgreSQL, Redis*
- Designed and built online hub for Famo.us developers using cutting-edge, undocumented graphics framework. Look for it to be demoed at upcoming HTML5 Developers conference!
- Setup sophisticated backend routing with multiple Node servers, PostgreSQL and Redis databases to provide robust, scalable API with async file parsing and storage
- Delivered a full featured online IDE with project management tools by coordinating full integration with second team, allowing developers to code and deploy online without having to setup up a dev-environment on their personal computers
- Created Famo.us Gallery where developers can showcase their latest projects to the public, earn points and connect with other developers

Full-Stack Software Engineer - Contrast.io (contrast.io)   2014
Online art portfolios with modern social game dynamics   *Angular, Node, Sails, SocketIO, Neo4j, Redis*
- Built RESTful API using Node and Sails.js, allowing rapid iterations and end-to-end feature tests; Also built user account creation capabilities, authentication and session management
- Architected and developed fluid, performant, single-page app using Angular and UI-Router to provide state-routing
- Integrated Socket.IO to provide real time modal updates of engagement events, akin to push notifications on mobile
- Setup multiple db's, Neo4j for profile storage and Redis for session data, and custom data access layer to interface with both

Full-Stack Software Engineer - Herrald (herrald.cloudapp.net)   2014
Tool to reimagine Craigslist job postings data and make it more meaningful   *Node, Express, MMM, Google Maps API, Kimono*
- Designed, architected and implemented dynamic new front end for Craigslist job posting data with greatly enhanced aesthetics and improved usability of data
- Created rating feature for user to organize postings and a unique notebook feature to keep private notes on each listings
- Implemented Google Maps API to show location for all listings on one map, used geocoding to overcome lack of coordinates

Software Engineer (Promoted from Dev Rel.) - Yogiplay (Letter Guess Challenge – Google Play Store)   2013
Kids mobile education startup providing analytics for parents   *Unity3D, PHP, JS, AndroidSDK*
- Developed kids educational game in Unity 3D. Responsible for concept, storyboarding, programming, graphics, sound. The sole owner and developer of product. App is live in Google Play Store.
- Responsible for front-end development of educational web platform - currently being piloted with children in public schools

---

RELEVANT EXPERIENCE

Developer Relations - Yogiplay   2012
In charge of all aspects of developer relations for kids education startup   *Yogiplay SDK, Google Analytics*
- Managed 30-40 developers at a time on average, helping them integrate custom SDK into their apps, providing marketing support, and keeping track of analytics on user engagement, downloads and conversion rates

Project Manager - WooEB Inc   2011
In charge of developing multiple ADit mobile apps   *iOS SDK*
- Solely responsible for design, function, planning, marketing, and resource allocation for ADit apps, discount deals apps, currently live in the app store
- Responsibilities included understanding project goals, writing detailed technical specifications, finding and negotiating with offshore contractors, obtaining cost proposals, and prioritizing requirements to meet deadlines.

EDUCATION

- **Advanced Software Engineering Immersive,** Hack Reactor   2014
- **Finance – M.S.,** Georgia State University   2010
- **Economics – B.S.,** Georgia State University, Magna Cum Laude   2009

PERSONAL

- Language fluency: English and Telugu; Hobbies: Motorcycles, Boxing, Running, "foodie"; World traveller: London, Paris, Rome, Amsterdam, Singapore, Kuala Lumpur, New Delhi
